## ABOUT PROJECT

The project aimed to develop an innovative cybersecurity platform called Armageddon, designed to empower organizations in strengthening their "human firewall" against cyber threats. The primary goals were to automate the delivery of realistic phishing simulations, provide engaging awareness training, and enable continuous monitoring for potential threats. By combining these elements, the platform sought to proactively test, train, and enhance employees' ability to identify and respond to social engineering attacks, data breaches, and other cyber risks effectively.

### TOOLS / TECHNOLOGIES USED

# Features

## KEY HIGHLIGHTS OF THE PROJECT

The key features and functionalities of the Armageddon platform included an AI-driven simulation program, interactive awareness training modules, and comprehensive threat intelligence capabilities.

- The simulation program leveraged AI to generate and deliver customized phishing simulations tailored to the organization's industry, employee behavior, and the latest global threat intelligence.
- The awareness training component offered gamified, scenario-based modules developed using neuroscience and micro-learning principles to cultivate practical cybersecurity skills and crisis response abilities among employees.
- The threat intelligence component continuously monitored for data breaches, leaked sensitive information, typosquatted domains, and potential phishing campaigns targeting the organization, enabling proactive identification and mitigation of social engineering risks.

**We listen. We advise. We design, together.**

Happy customers & ongoing relationships are what we strive for. Success is measured by results, the most important being how our clients feel about their experience with us.

THANK YOU

**FOR YOUR BUSINESS.**

The foundation of our company is laid on the basic principle that "Our Clients are Our Partners" - this drives the organization to keep the focus towards continuous process and product improvement.
